

Powered Bridging Platform

For certain types of curved staircase the powered bridging platform can be a cost effective alternative to a traditional curved stairlift

As the lift arrives at the top of the rail, the platform is lowered into position to form a bridge across the landing. Once the lift meets the platform you are free to walk across the platform onto the landing.

The platform is raised and lowered using the red button on the handset.

The Compact Straight Stairlift is operated using the main stairlift controller.

Powered Bridging Platform

INCLUDES THE UNIQUE BISON SAFETY BARRIER ARM

Stairlift will only operate from the handset

Stairlift will operate using the main lift controller or the remote handset

Stairlift will not operate

Designed & Manufactured in the UK

Manufactured by: Bison Bede Ltd., Unit 9,
No. 1 Industrial Estate, Consett, Co Durham DH8 6ST
www.bisonbede.com

Both mechanically and electrically interlocked - the lift will only operate from the main lift controller when the safety barrier arm is secured in position.

The lift may also be operated using the wireless remote control hand sets from the top or bottom of the stairs.

The Barrier arm may also be opened to 180 degrees to allow access to the lift, where there is limited space opposite the chair in the hallway.

Technical Data

- The platform can accommodate up to four steps
- Maximum stair angle of 60 degrees
- Minimum stair angle 25 degrees
- The platform board has a maximum size of 1200mm x 1000mm
- Safe Working Load (SWL) limit up to 28 stone (180kg)
- Minimum clear width of 680mm + clearance with a fixed seat
- Minimum clear width of 800mm + clearance with a swivel seat
- Auto park option is compatible with a Bridging Platform

Safety Features

- A non slip, black rubber on the walking surface.
- A slipping clutch enables emergency manual operation and provides a safety overload protection. The motor will not drive against a loaded platform.
- A safety barrier arm fitted on the downside arm.
